

Career Accelerator Program

by
Grffyn Education

Helping Ambitious Students to Build a Meaningful
Portfolio Today for a more Competitive
University Application in the Future.

Program Overview

The Career Accelerator Program helps students to take a long-term view of their future, by first identifying best-fit career pathways through our discovery program, then charting a course to achieve their career and life goals. By helping students build a compelling CV and develop relevant skillsets the program aims to give students the best possible opportunity to enter the most competitive universities that act as a springboard to their dream careers.

Profiling Test

We start with a profiling test by professional training companies to determine the best possible career pathways for your child

Career Mentorship Program

We design programs and connect students with mentors to help them learn about their preferred industries

Portfolio Construction

We guide students through projects and competitions to help them build a convincing and compelling CV in their interested field of study, to stand out in an increasingly competitive field of top universities from which top firms will hire

About Us

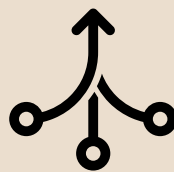

Grffyn Education brings a deep network of mentors from top firms in elite industries, spanning technology, finance, law, medicine and consulting - some of the most competitive and desirable sectors to start your career. Get access to mentors who graduated from Top UK (Oxbridge/LSE/Imperial) and US Universities (Ivy Leagues, Stanford, MIT) who are currently working in Top Global Firms including JP Morgan, Bain & Co, Meta, White & Case and more!

Top-Tier Mentor Network

Get access to a top-tier mentor network to get unparalleled insights on the most desirable industries to work in to make an informed decision on your university choices.

Explore Different Career Opportunities

Consider multiple possible career options, delve into the nitty-gritty, then narrow down your focus on a few select best-fit pathways

Learn the Pathways into these Industries

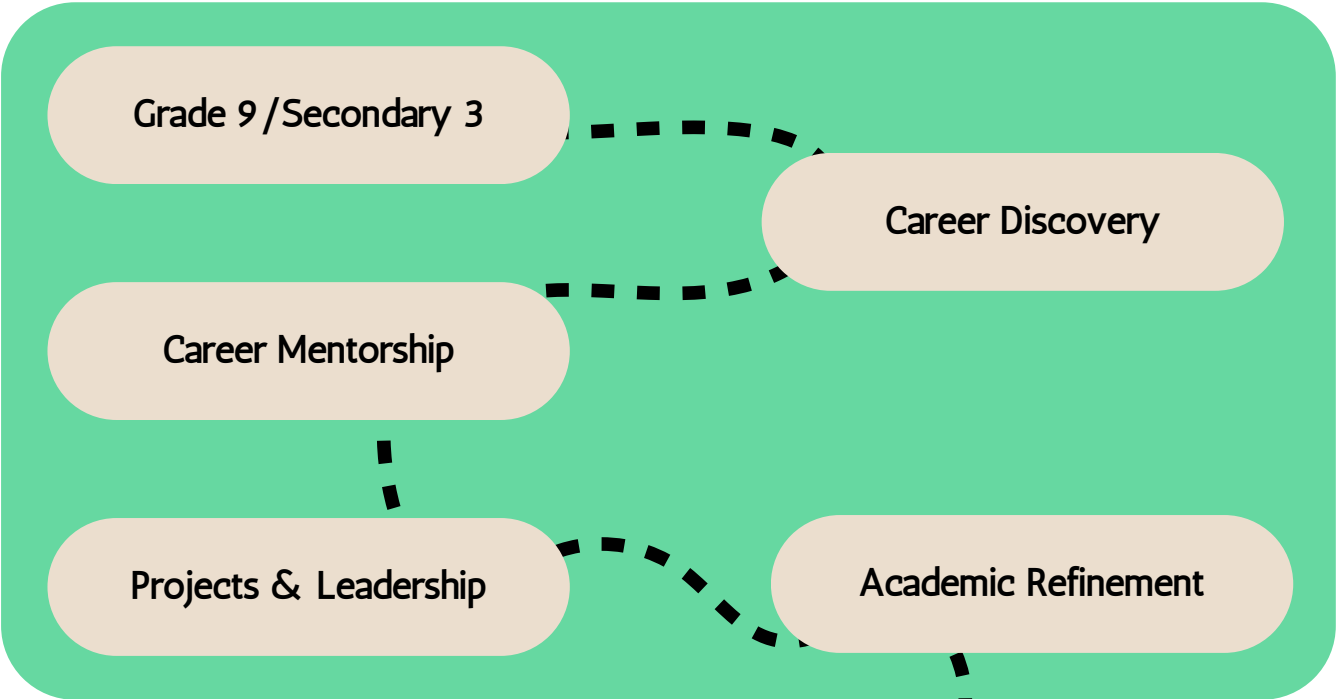

Hear from the insiders about what it took to get them into these competitive sectors, what mistakes they made and how to plan for a smoother pathway into the industry

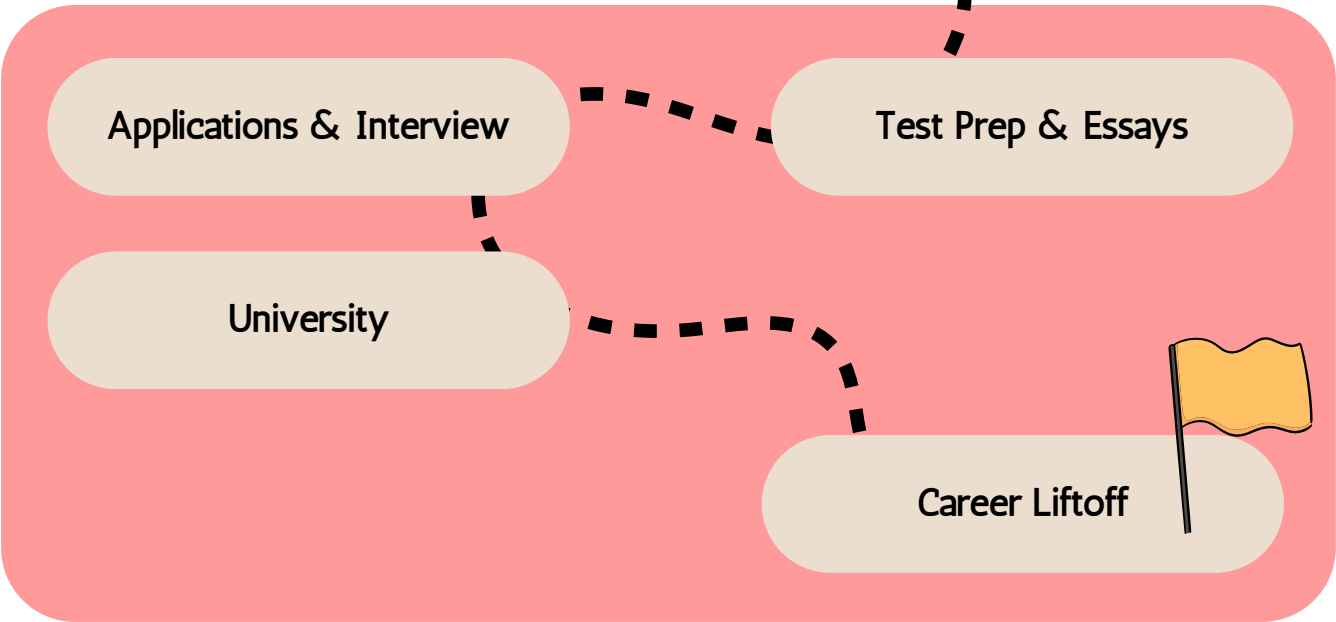

Refine Your Edge

We believe in working backwards from a predefined career plan to determine the best universities to apply, the most appropriate courses to take, and the most genuine portfolio we could help you build. While some believe that admissions to competitive UK and US universities are a short-term game - it is not. Planning begins 3-4 years prior to applying. Academic pre-requisites are one thing; resumes are much harder to engineer in a short span of time.
